

September 28, 2015  
Rio Grande Identification Project Meeting  
Edinburg, Texas

### **Summary of Cases from Brooks County**

**169 cases** have been recovered from Brooks County either by exhumation from Sacred Heart Cemetery or obtained from Elizondo Mortuary in Mission, Texas (one case consisted of nonhuman remains and is not counted in the total)

**106** at Baylor University  
**63** at Texas State University

### **Baylor Case Summary**

106 Cases from Brooks County currently at Baylor University

- 96 Cases have been processed (91%) (soft tissue removed from remains – longest part of the process because most are mummified) Only 10 cases left that need to be cleaned
- 64 Entered into NamUs (60%)
- 57 DNA Sampled (54%)
- Anticipated completion date of all cases: February 2016

### **Texas State Case Summary**

Full report by Dr. Spradley

63 Cases Delivered by Baylor University

- 36 Completed and entered into NamUs (57%)

Additional cases have been received by Dr. Spradley from Dr. Stern and are not included in this summary

### **Processing**

The remains are cleaned so that the skeleton can be fully examined. This process is the slowest step in the procedure because most of the remains have a great deal of mummified ligaments, tissue and cartilage that must be painstakingly removed. There are 5 separate laboratory rooms that are utilized for cleaning of remains and clothing and only one case allowed in a room at a time.

### **Analysis**

Remains are analyzed to produce a biological profile and an odontology report. In addition, trauma, pathologies and taphonomic changes to the bone are documented. All skeletal elements are measured and the data is entered into ForDisc and analysis is done for estimation of sex and ancestry. The skeleton is photographed as well as indicators of age, pathology or trauma. Each skull is 3D scanned and stored. We have attempted rehydration for fingerprint analysis but have not had any luck as the remains are typically too decomposed.

### **Clothing and Personal Effects**

Clothing and personal items found with the remains are cleaned, documented and photographed. It is essential to clean the clothes, as they are not fit for a family member to see in the condition in which they are found. This is done by hand as most items are fragile. Before cleaning the clothes are searched for any hidden information that may be sewn into hems or lining. Items are photographed pre and post cleaning.

We have the recent addition of two professional photographers. After cleaning, the professional photographers take photographs of each individual item. We document each item with a description as well as any information such as color, size and brand. This information and photographs will all be uploaded into NamUs. The Texas Observer will begin publishing photographs in November of clothing and personal effects of the unidentified in order to reach families of the missing as well as those who represent them in the search process. We are also at the beginning stages of developing a plan for a website that has a searchable database of clothing and personal items for investigators and families to use.

### **Facial Reconstruction**

Several forensic artists have volunteered their time to provide facial reconstructions of the unidentified and we are working on a dissemination plan. PJ Puterbaugh has been assisting Baylor and just completed a full facial reconstruction of a 12 year-old boy from the Texas border. She has now graciously agreed to work on all of the remains that come to our lab. Karen Taylor who is renowned not only in Texas also in the world is completing 15 cases at Texas State and I imagine that she will also continue in this effort. We are very grateful for their generous donations of time and talents.

### **NamUs and DNA Submission**

All case information and documentation is entered into NamUs: circumstances, biological profile, dental charting, clothing description and photographs, case reports.

A DNA sample is taken from each case for submission to UNT for analysis, comparison and inclusion into NDIS. The case files are included in the entry as well as any other documentation that we are able to find regarding the individuals such as witness of removal, death certificate and law enforcement reports and photographs.

### **Repository of Unidentified Remains at Baylor University**

**Baylor University is willing to store the remains until identifications are made for each individual.**

- Ensures that the remains are available when an identification is made so that they may be repatriated as quickly as possible to the family.
  - No remains should be buried and then subsequently lost - see Case 527 attached
- Will allow new technologies as they are developed to be applied to any unidentified cases
- This saves county money, as they do not need to pay for the burial plot or the costs of interment.

- It also saves the time and costs associated with a disinterment should identification happen in the future.
- This also ensures that the individual's remains can be located as many cemeteries and funeral homes have poor record keeping and documentation of the graves. (see Baylor Case 0527 for example)
- Lastly, as new technologies emerge, with the remains accessible these may be applied to the unidentified individual increases the likelihood of identification.
- Dignity and respect essential so the individuals in the laboratory both living and deceased and well as the work that is undertaken are blessed periodically by both Catholic priests and Protestant ministers. The overwhelming majority of immigrants along the southern US border are of Catholic faith. Baylor's motto is *Pro Ecclesia, Pro Texana* meaning For Church, For Texas and is the only university founded in the Republic of Texas.

### **Baylor Forensic Laboratory Security**

- Former Secret Service Agent to George Bush, Mark Childers has been in charge of implementation of the security for the forensic laboratory.
- Access to the laboratory
  - Dr. Lori Baker, Director
  - Retired Texas Ranger, Sgt. Jim Huggins
  - Mary Lynn, Laboratory Coordinator
  - Additional Key in Police Department Lock Box for emergencies
  - Any other entrants must be accompanied and supervised by Baker, Huggins or Lynn
- The building has an alarm system that must be deactivated by authorization before entry. This is directly tied into the Police Department for immediate response.
- The forensic labs are on another alarm system that must be deactivated by authorization before entry. This is also directly tied into the Police Department for immediate response.
- We are in the process of installing card readers to each of the interior and exterior doors to be in addition individual access code entry.
- Motion detection is activated inside the building to trigger alarm at Police Department when activated
- Video Surveillance
  - The outer doors of the building are under video surveillance at the Police Department and recorded
  - Each of the internal laboratory doors are under video surveillance and recorded by the Police Department

### **Future Plans and Requests**

The Reuniting Families Project (FRP) at Baylor University would like to continue to lead efforts to exhume the remains of the unidentified that have not had a proper forensic analysis performed, had DNA samples submitted to UNT and have not been included into NamUS. RFP has worked for over a decade on border crosser identifications and is dedicated to continuing this effort in Texas.

The project has been fully supported financially by Baylor University and private donations of expertise, time and talents so RFP has been able to do a tremendous amount of work without any cost to the counties or the state.

The International Commission on Missing Persons has received recognition as an international organization and has recently moved their offices to The Hague. Dr. Baker spoke at their first conference in The Hague and understands how this new recognition has facilitated the ability of ICMP to do their important work. The Reuniting Families Project respectfully requests the Commission to officially recognize the project and lend its support to the project for future forensic exhumations in counties who need our assistance.

In addition, if there are state funding opportunities, RFP would very much like to submit a proposal for financial support to continue our work. This would enable us to not only do more work but to hire staff so that we could perform work faster.

### **Baylor Case #0527**

**6-11-2015** Baylor Case #0527 was picked-up from Elizondo Mortuary in Mission, TX by Lori Baker and transferred to Baylor University (see Transfer of Custody Form)

- Electronic Death Record (EDR): 1016197
- Justice of the Peace #3: Judge Roel Villarreal
- Location of recover of remains: King Ranch, Las Viboras Gate
- Date recovered: September 5, 2011
- Transported to Howard Williams Funeral Home to be transferred to Elizondo Mortuary

### **Written on the white outer body bag:**

Unknown

Disinterred 2-27-13 for DNA (not documented who did the exhumation)

Sacred Heart Falfurrias

Inside of white body bag, there is a black body bag with dirt most likely the original body bag and the white bag was added after exhumation

Documents inside the body bag match those obtained at Elizondo Mortuary

### **UNT DNA Form:**

Submitting Agency 1: Elizondo Mortuary

Submitting Agency 2: Consulate of Guatemala

Not a match

Agency Case Numbers: 212, Brooks County Sheriff's Office #11-09-05-292

UNTCHI Case Numbers: 12-0288

Missing Person: Manuel Macario Velasquez

### **Problem:**

BCSO Case #11-09-05-292

- The photographs of this case in the BCSO report do not match those of the remains in the body bag.
- The photographs in the report have a pair of underwear still on the deceased with a waistband that clearly have "Spongebob" printed on them in yellow.
- The remains in the body bag opened at Baylor University have a pair of underwear on as well but they are remarkably different.
- Also, the remains in the BCSO case file photos are missing maxillary anterior teeth and all those on the right side of the mandible.
- The remains at Baylor are not missing the same teeth.

### **Conclusion**

The remains exhumed 2-27-2013 for DNA analysis are not same remains documented in the BCSO report and are most likely not the remains that were meant to be compared with the FRS. The funeral

home in charge of the burial and exhumation did not do its due diligence. This is not an isolated occurrence.
